

FEYNLAB® LEATHER TREATMENT

Product Description

FEYNLAB® LEATHER TREATMENT is a nano-ceramic infused leather conditioner and cleaner. It stands somewhere between a gentle leather cleaner, a traditional leather conditioner and a modern leather coating. The pH balanced cleaners gently lift and remove embedded dirt, oil and stains, while the ceramified conditioners penetrate deep into the pores of the leather to prevent premature aging. The ceramified conditioners restore and maintain your leather's natural moisture balance without adding any cheap, greasy silicon residue of lesser leather products. Your leather will be left looking, feeling and smelling new and most importantly protected from UV degradation, drying, cracking and minor staining.

Product Benefits

FEYNLAB® LEATHER TREATMENT was created as an affordable, consumer-grade leather conditioner with superb ceramic protection giving up to 6 times the durability of a traditional leather conditioner. It leaves a non-greasy natural matte finish that feels like satin to the touch, all while restoring that subtle "new-car" leather smell.

Durability, Warranty & Specs

Consumer-grade. Expected durability of 6 months+ on low-traffic areas. For best results reapply a small amount to heavily trafficked areas such as the driver's seat every 3 months. Improved durability can be achieved using FEYNLAB® LEATHER COATING.

APPROVED SURFACES FOR APPLICATION – DO NOT apply to unapproved surfaces

- Leather Seats
- Leather Arm Rests
- Leather Dash & Door Trim
- Other Leather Surfaces like Purses, Handbags & Shoes

Included

120 ml of FEYNLAB® LEATHER TREATMENT

Cautions

Always wear gloves during application. Ensure application area is free of loose contamination.

Prepping the Surface

Thoroughly vacuum and remove any loose debris from the surface to be treated. Not intended for extremely dirty leather surfaces. If leather is extremely dirty and stained you may opt for a deeper cleaning of the leather prior to application.

Directions

Prior to application place vehicle in a well lit, temperature controlled 10°C-30°C (50°F-85°F), & contamination free environment.

Shake Well Prior to Use

Apply several drops to a microfiber or foam sponge and buff an even, thin coat into the leather surface, making sure to focus on the seams and edges of the leather as these tend to dry out the fastest. Ensure you have adequate and even coverage before moving onto the next panel.

Allow the product to work itself into the leather for at least 30 minutes before doing a final buff with a clean microfiber towel.

Allow surface to fully dry before use. Typically 2-4 hours prior to driving. A full 24 hour curing time is needed for optimal performance and stain resistance.

Layering / Reapplication

A second application may be necessary for extremely neglected and dried out seats.

For best results, reapply every 6 months. On heavily trafficked areas like the driver's seat, reapply every 3 months.

Post Application Instructions

Avoid any incidental water exposure for 24 hours

Avoid all chemicals for 7 days

Clean interior surfaces using a damp microfiber cloth.
